Air-Vac’s M-25uv On Guard for you 24/7

Protect Your Most Important Customers

Poor air quality puts your most important clients, the animals, at risk during their stay at your facility. Our air cleaning system protects against Kennel Cough, canine influenza, distemper, coronavirus, bordetella, feline calicivirus & other pathogens.

Air-Vac’s M–25uv

This NASA developed air purification technology is the most powerful on the market. The M–25uv is an ideal air filtration solution for medium to large sized facilities.

The system processes 2,500 cubic feet of air per minute effectively killing biological contaminants like, mold, bacteria and viruses- airborne and on surfaces like countertops. It will also neutralize heavy odors, toxic gases, carcinogens, chemical pollutants and volatile organic compounds (VOC’S).

Prevents & Destroys

- Bacteria & Viruses
